

Build a Sample Web App

Expectation:

- Submit codebase through Git
- Design Work (Ignore the Header and Footer; Concentrate on the Content Area)
- API integration with dynamic structure creation.
- Data Handling and Navigation

Sample UI : (Custom CSS)

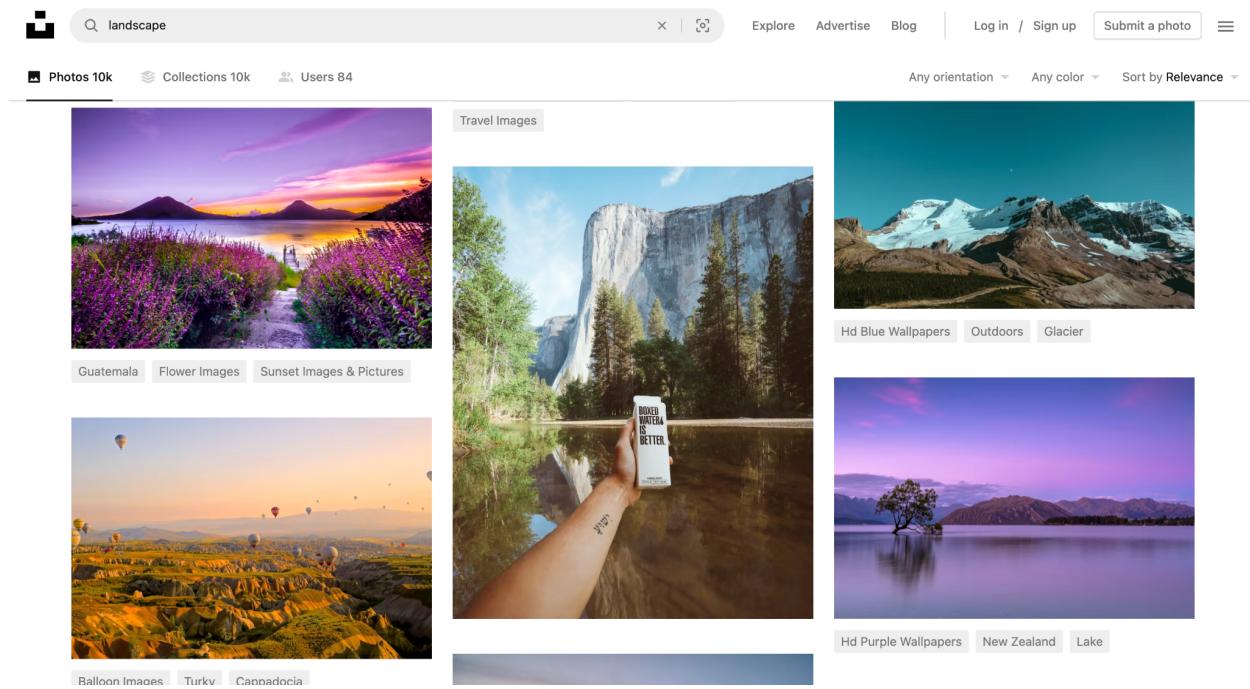

Create an application that will look like the above mentioned image. The list of images can be retrieved from the [unsplash api](#). (Signup and Get the API Token from Unsplash Developer account. Reach us for guidance if any)

API details:

- <https://unsplash.com/documentation#list-photos>
- <https://unsplash.com/documentation#get-a-photo>

It should follow **masonry** style that will accept horizontal and vertical images and align them accordingly, like the below image.

On Click of the image it should display the details(Meta data) like the image below. Also include the functionalities for navigation(Previous and Next image).
